Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

- I- SUBCELLULAR LOCATION: Expressed in placenta. Also detected in HeLa SISUE SPECIFICITY: Expressed in placenta. Also detected in HeLa SI cells, but not in the other cancer cell lines tested.
- I- SIMILARITY: CONTAINS I CARD DOMAIN.
- I- SIMILARITY: CONTAINS I GUANYLATE KINASE-LIKE DOMAIN.
- I- CAUTION: Supposed to contain a SH3 domain which is not detected by PROSITE, Pfam or SMART.

-!- FUNCTION: Activates NF-kappaB via Bcl10 and IKK.
-!- SUBUNIT: CARD14 and Bcl10 bind to each other by CARD-CARD interaction (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: CONTAINS 1 CARD DOMAIN.

                                                                               Interaction.

-1- SUBCELLUIAR LOCATION: Cytoplasmic.
-1- SUBCELLUIAR LOCATION: Cytoplasmic.
-1- TISSUE SPECIFICITY: Detected in adult peripheral blood leukocytes, thymus, spleen and liver. Also found in promyelocytic leukemia HL- 60 cells, chronic myelogenous leukemia K562 cells, Burkitt's lymphoma Raji cells and colorectal adenocarcinoma SW480 cells. Not detected in HeLa S3, Molt-4, A549 and G431 cells.
-1- SIMILARITY: CONTAINS I CARD DOMAIN.
-1- SIMILARITY: CONTAINS I GUANYLATE KINASE-LIKE DOMAIN.
-1- SIMILARITY: CONTAINS I GUANYLATE KINASE-LIKE DOMAIN.
-1- SIMILARITY: CONTAINS I GUANYLATE KINASE-LIKE DOMAIN.
-1- FROSITE, Pfam or SMART.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CARA_HUMAN STANDARD; PRT; 1032 AA.

J. Cell Biol. 121:491-502(1993).

FOUCTION: THE N-TETMINAL MAY BE INVOLVED IN TRANSDUCING A SIGNAL REQUIRED FOR TIGHT JUNCTION ASSEMBLY, WHILE THE C-TERMINAL MAY HAVE SPECIFIC PROPERTIES OF TIGHT JUNCTIONS. THE ALPHA DOMAIN MIGHT BE INVOLVED IN STRABILIZING JUNCTIONS.

SUBUNIT: INTERACTS WITH OCCLUDIN, CLAUDINS AND ZO-3.

SUBCELLULAR LOCATION: PERIPHERAL MEMBRANE CYPOPLASMIC SIDE.

MOVEMENT OF ZO-1 FROM THE CYTOPLASM TO MEMBRANE IS AN EARLY EVENT OCCURRING CONCURRENTLY WITH CELL-CELL CONTACT (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SIMILARITY: CONTAINS 3 PDZ/DHR DOMAINS.
SIMILARITY: CONTAINS 1 SH3 DOMAIN.
SIMILARITY: CONTAINS 1 GUANYLATE KINASE-LIKE DOMAIN.
SIMILARITY: BELONGS TO THE MAGUK FAMILY OF CELL JUNCTION PROTEINS.

C. -!- ALTERNATIVE PRODUCTS: 4 ISOFORMS; A1 (SHOWN HERE), C1, A2 AND C2;

ARE PRODUCED BY ALTERNATIVE SPLICING AND ALTERNATIVE INITIATION.

C. -!- TISSUE SPECIFICITY: THIS PROTEIN IS FOUND IN EPITHELIAL CELL

JUNCTIONS. ISOFORM A1 IS ABUNDANT IN THE HEART AND BRAIN WHEREAS

C. ISOFORM C1 IS EXPRESSED AT HIGH LEWEL IN THE KIDNEY, PANCREAS,

HEART AND PLACENTA. IN BRAIN AND SKELETAL MUSCLE, ONLY ISOFORM A1

IS DETECTABLE. ISOFORM C1 IS FOUND IN NORMAL AS WELL AS IN MOST

ON NORMAL TISSUE.

IN NORMAL TISSUE.

C. -!- SIMILARITY: CONTAINS 3 PDZ/DHR DOMAINS.

C. -!- SIMILARITY: CONTAINS 1 SH3 DOMAIN.

C. -!- SIMILARITY: BELONGS TO THE MAGUK FAMILY OF CELL JUNCTION PROTEINS.

C. -!- SIMILARITY: BELONGS TO THE MAGUK FAMILY OF CELL JUNCTION PROTEINS.

C. -!- SIMILARITY: BELONGS TO THE MAGUK FAMILY OF CELL JUNCTION 1086

ONWARD DUE TO A FRAMESHIFT.

-!- FUNCTION: PLAYS A ROLE IN TIGHT JUNCTIONS AND ADHERENS JUNCTIONS.
-!- SUBUNIT: INTERACTS WITH OCCLUDIN.
-!- SUBULILIAR LOCATION: PREIPHERAL MEMBRANE. CYTOPLASMIC SIDE.
-!- SIMILARITY: CONTAINS 3 PDZ/DHR DOMAINS.
-!- SIMILARITY: CONTAINS 1 SH3 DOWAIN.
-!- SIMILARITY: CONTAINS 1 GUANYLATE KINASE-LIKE DOMAIN.
-!- SIMILARITY: CONTAINS 1 GUANYLATE KINASE-LIKE DOMAIN.
-!- SIMILARITY: BELONGS TO THE MAGUK FAMILY OF CELL JUNCTION PROTEINS.

                                                     ATTENDED FOR THE ACAC SECTION OF SEPTIAL DEPOSOPHILA

"THE Light junction protein 20-1 is homologous to the Drosophila

RT discs-large tumor suppressor protein of septate junctions.";

Proc. Natl. Acad. Sci. U.S.A. 90.7834-7838(1993).

1. FUNCTION: THE N-TERMINAL MAY BE INVOLVED IN TRANSDUCING A SIGNAL

REQUIRED FOR TIGHT JUNCTION ASSEMBLY, WHILE THE C-TERMINAL MAY

HAVE SPECIFIC PROPERTIES OF TIGHT JUNCTIONS. THE ALPHA DOMAIN

MIGHT BE INVOLVED IN STABILIZING JUNCTIONS.

1. SUBBUILT: INTERACTS WITH OCCLUDIN AND ZO-3.

1. SUBGELLULAR LOCATION: PERIPHERAL MEMBRANE. CYTOPLASMIC SIDE.

MOVEMBRY OF ZO-1 FROW THE CYTOPLASM IS AN EARLY EVENT

COCCURRING CONCURRENTLY WITH CELL-CELL CONTACT.

1. ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A

SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.

1. TISSUE SPECIFICITY: THE ALPHA-CONTAINING ISOFORM IS FOUND BOTH IN

EPITHELIAL CELL JUNCTIONS: THE SHORT ISOFORM IS FOUND BOTH IN

EPITHELIAL CELLS AND THE HIGHLY SPECIALIZED EPITHELIAL JUNCTIONS

"Conservation of the WD-repeat, microtubule-binding protein, EMAP, in
sea urchins, humans, and the nematode C. elegans.";
Dev. Genes Evol. 210:2-10(2000).
-!- FUNCTION: May modify the assembly dynamics of microtubules, such
that microtubules are slightly longer, but more dynamic.
-!- SIMILARITY: CONTAINS 9 WD REPEATS (TRP-ASP DOMAINS).
-!- SIMILARITY: BELONGS TO THE EMAP FAMILY OF WD-REPEAT PROTEINS.
                                                                                                     Gaps

                                                      The present sequence is human caspase recruitment domain-14 (CARD-14). The CARD-14 gene is located on chromosome 17. The CARD-14 is used for the detection of modulators that modulates the ability of CARD-14 to bind commodulators that modulates the ability of CARD-14 to of nuclear factor-kappa B (NF-kB). The CARD-14 is useful for regulating of nuclear factor-kappa B (NF-kB). The CARD-14 is useful for regulating growth and cell death and useful for the treatment of cancer. It is also useful for the treatment of autoimmune disorders (e.g., systemic lupus erythematosus), neurological disorders e.g., Alzheimer's and Parkinson's disease, inflammatory disorders, haematological disorders because immune disorders (e.g., canomia, myelodysplastic syndromes), mycocardial infactions, strokes, immune disorders (e.g., Crohn's disease, allergic rhinitis), cell signalling disorders and certain viral and bacterial infections.

                                                                                                                                                                                                                                                                                  (CARD-14). The CARD-14 gene is located on chromosome 17. The CARD-14 is used for the detection of modulators that modulates the ability of CARD-14 to bind to Bcl-10 and stimulates phosphorylation of Bcl-10 or activation of nuclear factor-kappa B (NF-KB). The CARD-14 is useful for regulating growth and cell death and useful for the treatment of activation of sourcer. It is also useful for the treatment of autoimmune disorders (e.g., systemic lupus erythematosus), neurological disorders e.g., Alzheimer's and Parkinson's disease, inflammatory disorders, haematological disorders strokes, immune disorders (e.g., and propagatory disorders), myocardial infarctions, strokes, immune disorders and certain viral and bacterial infections.
                                                                                       An isolated caspase recruitment domain polypeptide useful for regulating growth and cell death and useful for the treatment of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   present sequence is predicted human caspase recruitment domain-14

Novel caspase recruitment domain (CARD) proteins, CARD-9, CARD-10, CARD-11, useful as targets for therapy, as immunogens, and in screening and detection assays The present sequence represents novel human caspase recruitment domain, CARD-11. The polynucleotide encoding this sequence was isolated from a human T-cell cDNA library. Also described are novel human sequences for CARD-9 and CARD-10 (AAU01205, AAU01206) and rat CARD-9 (AAU01204). CARD-9, CARD-10 and CARD-11 interact with Bcl-10 which is thought to activate nuclear factor (NF)-kappaB and apoptosis. The sequences of the invention can be used for /note= "N-myristoylation site" 1088..1091 /note= "Casein kinase II phosphorylation site" 1120..1123 /note= "Casein kinase II phosphorylation site" 875 ce= "Casein kinase II phosphorylation site" site" 926..929 /note= "Casein kinase II phosphorylation site" 935..937 .859 ce= "Protein kinase C phosphorylation site" 050..1018 note= "Tyrosine kinase phosphorylation site" 050..1055 'note= "Protein kinase C phosphorylation

```
treating a disorder associated with abnormal levels of apoptosis by modulating the expression or activity of CARD-9, CARD-10, or CARD-11.

They can be used for the treatment of hyperproliferative disorders (e.g. cancer), autoimmune disorders (e.g. systemic lupus erythematosus), neurological disorders (e.g. Alzhelmer's disease), inflammatory disorders (e.g. Crohn's disease), and viral infection (e.g. HIV). The CARD composing the polynucleotide and an antibody which selectively binds to CARD can be used in screening and detection assays (e.g. chromosomal mapping, tissue typing), predictive medicine (prognostic assays, monitoring clinical trials, and therapy (treatment and prophylaxis). The CARD polypeptide may be used to screen for drugs that bind to and/or modulate it. CARD sequences are potential targets for regulating conducted in cancer. NF-kappaB signalling, stress-related response and apoptosis in human disease. A host cell containing a polynucleotide encoding CARD can be used to create transgenic animals.
                                                                                                                                                                                                                                                                                                                                                       ,

                                                                                                                                                                                                                 The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful im gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous aboverse, such as alzeines and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assaays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3;
                                                                                                                                                                                                                                        The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been lesolated and nuclocities sequences of 5'— and 3'—ends of the cDNA molecules have been determined. For inners for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; plakoglobin; cytostatic; osteopathic; dermatological; cardiant; plakoglobin related disease; skin carcinoma; acantholytic disease; basal cell carcinoma; squamous cell carcinoma; Naxos disease; extramammary Paget's disease; hart disease; skin blistering; subcorneal acantholysis; Grover's disease; Hailey'Hailey's disease; Darier's disease; ctodermal dysplasia; skin fragility syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 830 Primers useful for synthesizing full length cDNA clones and their

The invention relates to an isolated plakoglobin interacting polypeptide (I). (I) is useful as a medicament and in the manufacture of a medicament for treating plakoglobin related diseases, such as skin carcinoma or an acantholytic disease, and to screen compounds that interfere with the interaction of the polypeptide with plakoglobin The plakoglobin related diseases include basal cell carcinoma, squamous cell carcinoma, extramammary Paget's disease. Naxos disease, heart diseases, skin blistering and acantholytic diseases such as subcorneal acantholysis, Grover's disease, Hailey-Hailey's disease or Darier's disease, and ectodermal dysplasia-yskin fragility syndrome. Auvi3245-AAVI7354 represent novel human plakoglobin interacting protein amino acid sequences and related sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   59 CWVTRHAVESLMEKNTHALLDVQLDSVCTLHRMDIFPIVIHVSVNEKMAKKLKKGLQRLG 118

The present sequence represents novel human caspase recruitment domain, CARD-10. The polynucleotide encoding this sequence was isolated from a human skin cDNA library. Also described are novel human sequences for CARD-9 and CARD-11 (AAU01205, AAU01207) and rat CARD-9 (AAU01204). CARD-9, CARD-10 and CARD-11 interact with Bcl-10 which is thought to activate nuclear factor (NF)-kappaB and apoptosis. The sequences of the invention can be used for treating a disorder associated with abnormal levels of apoptosis by modulating the expression or activity of CARD-9, CARD-10, or CARD-11. They can be used for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel caspase recruitment domain (CARD) proteins, CARD-9, CARD-10, CARD-11, useful as targets for therapy, as immunogens, and in screening and detection assays -
